Frequently Asked Questions about Mango and Agarwood Investments

www.goldenforests.ai

Mangoes, Agarwood, and GoldenForests

What's the global demand for mangoes?

Mangoes are one of the **most consumed fruits in the world**, with roughly **45 million tonnes** eaten annually, five times more than strawberries. Global demand for premium mangoes continues to rise, particularly in countries where mango cultivation is limited.

Export markets are still developing, and availability has been restricted, which means international trade offers significant growth potential.

What's the global demand for Agarwood and Oud oil and Agarwood chips ?

Agarwood, derived from the Aquilaria Crassna tree, is the **most valuable wood in the world**. **Agarwood chips** are used for incense burning , traditional medicine and the **perfumery and cosmetic industry**. When the wood is distilled, it produces **Oud oil**, used in the **world's most expensive perfumes**, used by brands like **Tom Ford, Chanel, Givenchy,** and **Creed**.

Over **1,000 new fragrances** featuring Oud are launched every year. The global perfume industry is now valued at **USD 33 billion** and continues to expand rapidly.

Who is goldenforests.ai?

goldenforests.ai is a new-generation agroforestry company combining **scientific expertise, AI technology,** and **sustainable plantation management**.

We specialise in **Agarwood** and **Mango,** creating enduring value for investors and local communities by transforming tree plantations into internationally recognised assets that promote economic growth and biodiversity.

What's goldenforests vision?

To pioneer the future of sustainable agroforestry by becoming the **leading provider of premium Aquilaria Crassna** (agarwood), **mango**, in the **Philippines**, contributing to **local economic development**, biodiversity conservation, and **global environmental resilience**.

Mission, Values, and Objectives

What is goldenforests.ai's Mission Statement?

We aim to create **enduring value** for both **investors** and **local communities** by transforming **Asian tree plantations** into **internationally recognised assets** that deliver **economic prosperity** and **environmental sustainability**.

Our mission is to establish a **thriving and ethical agroforestry enterprise** that harnesses the unique potential of **agarwood** and **mango cultivation**. We are committed to **empowering local communities**, advancing **sustainable practices**, producing **world-class products**, and supporting **climate change mitigation**, resilience and adaptation.

What are goldenforests.ai's Core Values?

At **GoldenForests**, our work is guided by a firm set of values that shape every decision and action we take:

Integrity: We uphold honesty, transparency, and accountability in all aspects of our operations.

Professionalism: We strive for excellence, maintaining the highest standards in service, management and product quality.

Sustainable and Ethical: We are dedicated to responsible and sustainable cultivation of agarwood, mango, and durian, ensuring ethical sourcing and full compliance with international standards.

Quality: We employ rigorous propagation and cultivation methods to produce consistently premium-quality products that meet the expectations of discerning global clients.

Investment Opportunity: GoldenForests offers a unique opportunity for investors seeking participation in a profitable, future-focused, and environmentally sustainable agroforestry venture.

Community Empowerment: We prioritise local engagement, creating employment, building skills, and supporting social initiatives that enhance livelihoods and long-term community wellbeing.

What are goldenforests.ai's Key Objectives?

- Deliver **strong and sustainable returns** for **investors** by combining **advanced agroforestry science** with **state-of-the-art AI-driven plantation management**.
- Ensure **full regulatory compliance** and **licensing** in the **UAE** and **Asian partner countries**, setting a new benchmark for **transparent and ethical cross-border agricultural investment.**
- **Expand** our **investor network** and **regional presence** through **strategic partnerships** with linke-minded institutions and stakeholders.
- Establish **industry-leading standards** in **sustainable plantation management** and **responsible economic development.**
- Lead with **best-in-class governance** and **reporting**, fostering **trust, clarity** and **enduring relationships** with our investors and partners.

Sustainability and Ethical Practices

What is goldenforests.ai's Commitment to Sustainability?

Sustainability is central to our business. We want to combine **economic growth** with **environmental protection** and **social responsibility** through:

- **Permaculture Principles** – Designing plantations to mimic natural ecosystems for resilience and biodiversity.
- **Biodiversity & Agroforestry** – Integrating trees with plants and wildlife habitats to sustain healthy ecosystems.
- **Sustainable Cultivation** – Avoiding synthetic chemicals, focusing on natural soil enrichment and pest control.
- **Soil & Water Stewardship** – Using composting, and efficient irrigation to conserve natural resources.
- **Responsible Waste Management** – Reducing, reusing, and recycling all organic material to support soil health.

What are goldenforests.ai's Ethical Practices?

We operate under a strict ethical code based on **fairness, respect,** and **transparency.**

- **Fair Treatment of Workers** – We will ensure safe working conditions, fair pay, and equal opportunities.
- **Environmental Responsibility** – We will minimise our ecological footprint through sustainable resource use.
- **Commitment to Industry Standards** – We are committed to meeting and exceeding recognised certifications and sustainability frameworks.
- **Staff Development** – We plan to invest in continuous training and career progression for all employees.

What are goldenforests.ai's Research and Innovation Goals?

We will aim to invest in **ongoing research** to refine Agarwood cultivation and Agarood chips extraction methods. Our aim is to improve productivity, reduce environmental impact, and strengthen the long-term **economic viability** of sustainable agroforestry.

Values, Leadership, and Financial Strength

What are goldenforests.ai's Values?

Our guiding principles shape every decision we make:

- **Integrity and transparency** in management and reporting
- **Commitment to sustainability** and environmental care
- **Focus on quality** across all product lines
- **Empowerment of local communities** through fair employment
- **Dedication to innovation** in agroforestry and technology

What Drives goldenforests.ai's Success?

- A **strong management team with** deep industry expertise
- Ongoing **commitment to ethical and sustainable practices**
- Strong **relationships with local communities**
- Proven **market access** through global partnerships

What Drives goldenforests.ai's Success?

goldenforests.ai is **debt-free and fully self-funded.**

We own our plantations outright, giving us total control and stability. A **replacement-tree buffer stock** ensures every client's investment is protected.

The company benefits from the strategic support of a **former Chief Investment Officer** of one of the world's top five investment firms, a key angel investor who reinforces confidence in our financial management and growth strategy.

Ownership, Operations, and Advantages

Who owns the trees I purchase?

You do. When you buy trees from goldenforests.ai, you will become the **legal owner** of those trees. Goldenforests will simply manages them on your behalf, handling everything from **importing seedlings** or propagating seedlings in our own nurseries and **planting,** to **maintenance, harvesting**, and **marketing** the final products.

If you ever wish to change managers, you can terminate the contract and appoint a new one at any time. Your ownership remains fully protected.

What happens if goldenforests.ai were ever to cease operations?

Your ownership of the trees would remain unaffected.

If goldenforests.ai ceased operations, a new management company would be appointed to continue caring for your trees. You would retain complete ownership and control of your assets

---

What are the working conditions like at goldenforests.ai?

We will operate in accordance with the **UN Global Compact** principles for **fair working conditions, ethical pay, and safe workplaces.**

All staff will be employed under local labour laws, provided with fair wages, benefits, and safe conditions, reinforcing our commitment to social responsibility and transparency.

What makes GoldenForests.ai different from its competitors?

Our success stems from two years of detailed research and strategic development, combining:

- **University-level agricultural expertise**
- **AI-driven plantation management**
- **Commitment to sustainability**

This integrated approach positions goldenforests.ai at the **forefront of sustainable, real-asset investment** in Asia.

Do you offer an eco-tourism programme for investors?

Yes. Investors are warmly invited to visit their trees. We will provide an **eco-tourism experience** that includes a **stay at a luxury hotel**, guided plantation tours, and opportunities to meet the local team.

This will give investors a chance to experience their investment first-hand, combining education, community impact, and leisure.

Technology, Fees, and Operations

The "AI" stands for Agroforestry Intelligence, our proprietary use of artificial intelligence to manage plantations more efficiently.

We will use AI-powered systems for:

- **Crop monitoring and yield prediction**
- **Pest and disease detection**
- **Irrigation and fertilisation optimisation using AI and solar-powered pumps**
- **Precision agriculture** that maximises resource efficiency and sustainability

---

What fees does goldenforests.ai charge?

We charge a harvest management fee based on your crop type:

- **10 %** of Agarwood harvest proceeds
- **20 %** of Mango harvest proceeds

This model will ensure our interests are fully aligned with yours: the higher the sales price, the better for both the investor and goldenforests.

If the investment is so profitable, why does the company sell trees?

That's a good question.
Unlike many companies that raise capital by selling shares or taking on debt, goldenforests.ai chooses to stay **private and debt-free.**

By selling selected high-performance trees to investors, we:

- Avoid external borrowing
- Maintain full ownership and control
- Allow investors to share in the profits of sustainable plantations

This model will ensure our interests are fully aligned with yours: the higher the sales price, the better for both the investor and goldenforests.

How does goldenforests.ai ensure water supply for plantations?

All plantations will be fitted with **irrigation and drainage systems** connected to **solar-powered wells and pumps**, ensuring a consistent and sustainable water supply year-round.

Sustainability, Insurance, and Security

Are the trees grown sustainable?

goldenforests.ai follows strict **environmental and ecological guidelines**.
We avoid herbicides such as **glyphosate**, using natural and sustainable alternatives wherever possible.

In exceptional cases, minor use of approved insecticides may occur to prevent large-scale crop loss, as full organic certification is not always feasible in the Philippines' tropical climate.

Where necessary, **nutrient-rich fertiliser is applied via drip irrigation**, maintaining long-term soil health.

How do replacement trees work?

Each plantation includes a **buffer stock of replacement trees**, grown to the same age and size as client-owned trees.

If one of your trees is damaged or lost, a replacement is immediately assigned and replanted, ensuring **continuous yield performance.**

What happens if trees are destroyed or damaged?

All trees are covered under our **Harvest Guarantee Insurance**, which provides a **100 % replacement the guarantee** for losses caused by:

- Typhoons or storms
- Fire, lightning, or volcanic activity
- Floods
- Pests or disease
- Wild animal damage

Goldenforests also conducts **quarterly inspections** of every plantation, ensuring all trees are well maintained, properly irrigated, and protected by 24-hour on-site security.

Documentation, Ownership, and Harvest

How many replacement trees are kept in the Philippines?

Roughly **20% of all trees** grown by **goldenforests.ai** **will not be sold** but retained as company-owned **replacement stock.**

These trees will be kept at different sites and used to replace customer-owned trees of similar age and size in the event of damage or loss.

How does goldenforests.ai monitor tree growth and yields?

Each tree's **GPS position, height, diameter,** and **crown** size will be recorded digitally.
During each harvest, we will record the **exact quantity and weight** of mangoes or Agarwood chips from every tree.

All data is used to calculate accurate yields per tree and per hectare.
Investors receive an **official harvest declaration**, certified by goldenforests.ai and verified by independent auditors.

What documentation will I receive for my purchase?

When you invest, you will receive:

- A **Tree Purchase Agreement**, detailing your ownership, the number of trees, and their GPS coordinates
- A **Management Agreement**, defining goldenforests.ai's obligations to care for, harvest, and sell on your behalf
- A **Certificate of Ownership**, confirming your legal ownership and location of trees
- Annual reports and updates on growth and harvest performance

Ownership Transfer and Returns

Can I transfer my trees to someone else?

Yes. Your trees will be your private property.
You will be able to sell, gift, or transfer them to a third party at any time, free of charge.
Simply provide the new owner's details and we will issue updated ownership certificates.

What happens if I die or become incapacitated?

Your trees will form part of your estate and can be inherited by your next of kin, just like real estate or shares.

How much oud or wood chip yield can I expect per tree?

Based on extensive research and real-world experience, each Agarwood tree is expected to produce between **1.5 and 2 kg** of mid- to high-grade Agarwood chips.

Typically, **50 % of trees are harvested in Year 9**, and the remaining **50 % in Year 10**.
Yields may vary depending on growing conditions, but average production per tree remains consistent across plantations.

How long is the harvest period for mango trees?

Mango trees start producing fruit in **Years 4–5** and continue for about **25 years**.

After this time, yield levels naturally decline, and trees are typically replaced.

Will I receive annual income from my mango trees?

Yes. You will receive **annual harvest payments** starting from the **fourth or fifth year** after planting.

How to Invest

Before investing in forestry, it's important to **understand your goals** and **what you want to achieve**, just as you would with any other investment.
Buying trees may feel unfamiliar at first, but with careful thought and due diligence, it can become a **stable, long-term asset** in your portfolio.

These simple steps can help you make an informed and confident decision.

Step 1: Clarify Your Goals

Ask yourself what you want from this investment.
Are you focused on **financial growth, portfolio diversification, or steady long-term income?**
Do you want an investment that provides **natural capital appreciation**, assets that keep growing even when markets fluctuate?

Remember, trees grow continuously, regardless of economic conditions. Forestry can therefore provide **stability and resilience** during uncertain times.

Step 2: Define Your Investment Horizon

Agroforestry is a long-term commitment, designed for investors seeking consistent growth rather than short-term speculation.

Decide whether you're investing for:

- **Regular income** from mango harvests
- **Medium-term profits** from Agarwood production
- **Future wealth** or **retirement planning**

By defining your timeframe and objectives, you can choose the investment structure that best matches your **financial goals** and **risk tolerance.**

Step 3: Get to Know the Project

Explore how goldenforests.ai operates, visit our plantations, and ask as many questions as you like.
We are fully transparent about our methods, technology, and results, and welcome every investor to see **their trees in person**.

Our plantations are located nearbeautiful locations and beaches, making every visit both **educational** and **memorable**.

goldenforests.ai – Investing in sustainable growth, real assets, and a greener future.

Payments, Returns, and Realistic Expectations

How and when will I receive my harvest income?

All harvest proceeds will be distributed by 31 December of the harvest year.
You can choose to receive payments via:

Bank transfer in your preferred currency
Cryptocurrency, upon request
In-person collection at our Manila office

These returns sound too good to be true — are they realistic?

Yes. When compared with other asset classes, plantation ownership provides strong returns because it's based on **real, productive assets**, not financial speculation.

Unlike a fixed bank deposit yielding 1–2 %, or bonds paying 3–5 %, **agroforestry investments** combine both **capital growth** and **recurring income**.

As population growth and inflation continue worldwide, **demand for natural products** — food, wood, and essential oils — remains constant.

Trees grow steadily regardless of market cycles, making agroforestry one of the **most reliable long-term investments** available today.

Start your sustainable investment journey with goldenforests.ai today.

Why Invest in Agroforestry in the Philippines?

Why should I consider investing in agroforestry in Asia — especially the Philippines?

Agroforestry is one of the most stable and profitable global asset classes, generating around **USD 8 billion** in annual turnover. Over the past fifty years, it has consistently outperformed equities, bonds, and savings deposits.

Agriculture and forestry remain in constant demand, offering reliable long-term growth and portfolio diversification. The **Philippines** is an especially attractive location due to its **booming economy, ideal tropical climate**, and **fertile farmland**, much of which is being converted from former sugar plantations to sustainable tree cultivation.

Our plantations are inland, away from coastal zones, and will therefore be protected from tsunamis, major floods, and volcanic activity. Labour costs and land prices are also lower than in many neighbouring Asian countries, supporting strong investment efficiency.

Isn't the Philippines opaque or risky for foreign investors?

The Philippines has a clear and transparent legal framework for foreign investors in agriculture. Our plantations will be audited **annually by an independent firm**, which will count and verify every single tree.

We also invite all **investors to visit their trees in person,** covering the cost of a two-night stay at a leading local hotel. Visitors will be able to see first-hand how their trees will be cared for and managed to the highest standards.

What's the advantage of investing in tangible assets?

Investing in **real, physical assets** such as trees provides strong **protection against inflation** and **portfolio diversification**. Tangible assets like trees grow naturally over time.

Forestry investments offer **passive income** through harvest proceeds, supported by strong global demand. They also represent a **decentralised, inflation-resilient asset** outside the EU, providing extra protection for investors seeking long-term stability.
