Golden Forests

Company Boilerplate

Growing Wealth. Preserving Nature.

Short Version (50–75 words)

Use for: social media, brief mentions, quick introductions, event listings, i.e. Twitter/X bios, quick introductions, event listings with limited allowed company overview space.

Golden Forests is an agroforestry investment company offering professionally managed, high-value crop plantations in the Philippines. Specialising in premium agarwood, cultivated from *Aquilaria Crassna* and our proprietary Sweet Elena Carabao mango, we combine AI-enabled plantation management, exclusive cultivation technologies and institutional-grade transparency. For every tree purchased, we plant one native Philippine species, creating lasting value for investors, communities and the land.

Word count: 62 words

Medium Version (100–150 words)

Use for: event programmes, speaker bios, publication submissions, press releases, newsletters.

Golden Forests is an alternative investment company offering private and professional investors access to professionally managed, high-value agroforestry plantations in the Philippines.

We specialise in two of the world's most valuable natural commodities: agarwood, cultivated from *Aquilaria Crassna* and our proprietary Sweet Elena Carabao mango, a university-developed hybrid variety exclusive to Golden Forests. Our plantations in Southern Zambales are supported by a proprietary AI-enabled agroforestry intelligence platform providing GPS-verified tree locations, drone surveillance and independent auditing to deliver institutional-grade transparency.

As the first company to be issued a Wildlife Permit by the Philippine Department of Environment and Natural Resources to cultivate exotic Aquilaria Crassna, Golden Forests combines advanced cultivation technologies and elite variety development with a structured reforestation programme that plants one native Philippine species for every commercial tree purchased, delivering measurable environmental impact alongside attractive financial returns.

Long Version (200–250 words)

Use for: detailed profiles, comprehensive publications, investor materials, in-depth articles and annual reports when we get there.

Golden Forests is an alternative investment company offering private and professional investors access to sustainably managed, high-value agroforestry plantations in the Philippines.

We specialise in two of the world's most valuable natural commodities: agarwood, cultivated from *Aquilaria Crassna*, one of the world's rarest and most valuable trees and our proprietary Sweet Elena Carabao mango, a university-developed dwarf hybrid variety exclusive to Golden Forests. Our plantations are established across carefully selected sites in Southern Zambales, chosen using

rigorous agro-climatic evaluation criteria to optimise growth conditions for both crops and deliver outstanding harvest yields.

What sets Golden Forests apart is the science and technology behind every plantation. We are the first company to be issued a Wildlife Permit by the Philippine Department of Environment and Natural Resources to cultivate exotic *Aquilaria Crassna*, using exclusively licensed inoculation formulas from Thailand designed specifically for this DNA strain. Our mango programme employs university-developed dwarfing techniques enabling high-density cultivation at more than three times the industry standard, maximising both yield and land efficiency. Every investment is backed by a proprietary AI-enabled agroforestry intelligence platform, delivering institutional-grade transparency through GPS-verified tree locations, drone surveillance, satellite geotagging and independent annual auditing.

For every tree purchased, we plant one native endemic Philippine species, working closely with local communities to ensure that the prosperity generated by our plantations is shared by investors, people and the land. Golden Forests maintains collaborative research relationships with President Ramon Magsaysay State University, Visayas State University and the University of the Philippines Los Baños, supporting continuous innovation in sustainable agroforestry.

Our mission is to deliver exceptional returns through sustainable plantation investment, creating lasting value for investors, communities and the environment.

For investors. For the land. For the people.
